

SYLLABUS

1. Data about the program of study

1.1	Institution	The Technical University of Cluj-Napoca
1.2	Faculty	Faculty of Civil Engineering
1.3	Department	Structuri
1.4	Field of study	Civil Engineering
1.5	Cycle of study	Bachelor of Science
1.6	Program of study/Qualification	Civil, Industrial and Agricultural Buildings /Engineer (English language)
1.7	Form of education	Full time
1.8	Subject code	30.0

2. Data about the subject

2.1	Subject name				Geotehnica						
2.2	Course responsible/lecturer				Conf.Dr.Ing. Ilies Nicoleta-Maria-Nicoleta.Ilies@dst.utcluj.ro						
2.3	Teachers in charge of seminars				S.L.Dr.Ing. Gherman Calin-marius.gherman@dst.utcluj.ro						
2.4	Year of study	2	2.5	Semester	2	2.6	Assessment	E	2.7	Subject category	DID/DI

3. Estimated total time

3.1	Number of hours per week	4	3.2	of which, course:	2	3.3	applications:	
3.4	Total hours in the curriculum	56	3.5	of which, course:	28	3.6	applications:	
Individual study								hours
Manual, lecture material and notes, bibliography								24
Supplementary study in the library, online and in the field								8
Preparation for seminars/laboratory works, homework, reports, portfolios, essays								4
Tutoring								1
Exams and tests								3
Other activities								4
3.7	Total hours of individual study	44						
3.8	Total hours per semester	100						
3.9	Number of credit points	4						

4. Pre-requisites (where appropriate)

4.1	Curriculum	
4.2	Competence	

5. Requirements (where appropriate)

5.1	For the course	Cluj-Napoca, Str. G. Barițiu Nr. 25, Amphitheatre / TUCN Platform Microsoft Office Teams
5.2	For the applications	Cluj-Napoca, Str. G. Barițiu Nr. 25, Geotechnics Laboratory / TUCN Platform Microsoft Office Teams

6. Specific competences

Professional competences	<ul style="list-style-type: none"> -- Recognizing and using geotechnical terms in civil engineering field -- Identifying and classifying soils; -- Using soil parameters, determined in laboratory and in situ; -- Calculating soil stresses in soil massif; -- Calculating soil settlement; -- Calculating earth pressure; -- After the study of the discipline, students can use the apparatus for the geotechnical tests: hygrometer, thermometer, oven, Proctor apparatus, direct shear test apparatus, Oedometer, triaxial test apparatus etc. -- Technological and economical design for geotechnical works, -- Organizing and conducting geotechnical works, for civil, industrial and agricultural buildings -- Following quality and durable development requirements specific to geotechnical works
Cross competences	<ul style="list-style-type: none"> -- Responsible execution of professional tasks, in restricted autonomy conditions and qualified assistance: applying efficient and responsible work strategies, punctuality, reliability and responsibility, based on principles, norms and professional ethics, -- Acquaintance with roles and activities specific to teamwork and distributing tasks for subordinate levels, -- Awareness of lifelong learning; efficient use of resources and learning techniques for personal and professional development

7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	Development of competences regarding the soil behaviour as support for a construction, as load and as construction material.
7.2	Specific objectives	Assimilation of theoretical and practical knowledge regarding geotechnical parameters determination, soil settlement calculation, earth force calculation etc.

8. Contents

8.1. Lecture (syllabus)	Teaching methods	Notes
1) Introduction in geotechnics. Short history Soil composition and classification: Soil as three phase system. Solid phase. Soil structure and texture. Soil grading curve.	-	-
2) Physical and mechanical soil properties. Liquid phase (water in soil). The effect of surface phenomenon's on the behaviour of clayey soils. Capillary water. Free water.		
3) Water mechanical action on soils. The prevention of hydrodynamic water effect. Iced water.		
4) Soil compressibility: General information. Elastic compressibility. The principle of effective pressures and compaction law. One dimension compression. Unconfined compression.		
5) The influence of stress history. The influence of cycling loading. The anisotropy influence. The linear deformation modulus determination by on site tests.		
6) Soil shearing resistance. Soil shearing resistance. Soil shearing resistance determination.		

7) Soil shearing resistance tests. Factors influencing soil shearing resistance. Soil shearing resistance determination by on site tests.		
8) E. Stresses in the soil massif. General information. Vertical stress generated by soil self-weight. Stresses due to a vertical point load on the surface of elastic semi space. Stresses due to a linear load on the surface of semi space. Distributed pressures on a continuous strip having B width. Distributed pressures on a closed surface. Vertical stresses distribution in layered soils.		
9) The anisotropy influence. The influence of the limited thickness of the deformable soil layer. Contact pressures distribution on the foundation bottom.		
10) Foundation soil settlement. Deformations. Methods to calculate settlements. Semi theoretic computation methods. Consolidation settlement computation. Constructions deformations types. The effect of foundation displacements and deformations (settlements) on the construction.		
11) Soil lateral pressure. General information. Lateral pressure at rest lateral pressure. Lateral soil pressure calculation: Definition of limit equilibrium state; Active lateral pressure; Passive lateral pressure.		
12) Methods based on wedge theory: Active lateral pressure – Coulomb’s theory. Active pressures distribution on retaining structures. Active pressure calculation for layered soils. External loads influence. Passive lateral pressure –Coulomb’s theory.		
13) Considerations on computation methods for soil lateral pressure. The effect of retaining structure displacement on soil lateral pressure.		
14) Soil lateral pressure on retaining structures. Retaining walls. Soil lateral pressure on simple timbered retaining structures. Soil lateral pressure on diaphragm walls. Soil lateral pressure on anchored diaphragm walls

Popa, col., Fundații în condiții speciale de fundare. Lito IPCN 1992, 12) SR EN 1997-1: 2006 Eurocod 7: Proiectarea geotehnică. Partea 1: Reguli Generale. 13) Geologie, Indrumător pentru lucrările de laborator, A. Suciu, 2002 14) Handy R.L., Spangler M.G. – Geotechnical Engineering 15) Braja M.D. – Principles of Foundation Engineering 16) Lio Cheng – Soils and Foundations 17) Bowels J.E. – Foundation Analysis and Design 18) Teng W. C. – Foundation Design		

19) N. Ilies – Soil mechanics course (pdf files available for students in MS Teams) *References available in TUCN library		
8.2. Applications/Seminars	Teaching methods	Notes
1) Geotechnical indexes determination	-	-
2) Soil water content. Soil Consistency.		
3) Grading curve determination. Applications		
4) Proctor test		
5) Soil permeability		
6) Soil compressibility		
7) Soil shear resistance (I)		
8) Soil shear resistance (II)		
9) Swelling clays characteristics.		
10) Applications		
11) Soil lateral pressure. General information. Lateral pressure at rest lateral pressure. Lateral soil pressure calculation: Definition of limit equilibrium state; Active lateral pressure; Passive lateral pressure.		
12) Settlement computation		
13) Soil lateral pressure		
14) In situ geotechnical indexes determination. Geotechnical rapport. Finalizing laboratory works.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Acquired competences are necessary for the civil engineers who activate both in design and execution companies.

10. Evaluation

Activity type	10.1 Assessment criteria	10.2 Assessment methods	10.3 Weight in the final grade
10.4 Course	1-2 numerical applications and 3-4 theoretical questions	Written test – duration: 2-2.5 hours	70% (50% theoretical questions + 20% numerical application)
10.5 Applications	3 written tests with 3-4 questions from the laboratories done during the semester	Written test – duration: 15-20min/ test	30%
10.6 Minimum standard of performance			

-- Course: numerical application (min. grade: 5) and theoretical questions (for each theoretical question the student will receive a grade, the minimum grade for each question is 5)

-- If the numerical application grade is <5, the student is not eligible for the theoretical examination.

-- Application: If the tests grade is <5, the student is not eligible for the final examination. Attendance to the final exam is conditioned by attending all the laboratory classes and having a grade >5 to all the laboratory tests

Date of filling in:		Title Surname Name	Signature
	Lecturer	Conf.Dr.Ing. Ilies Nicoleta-Maria	
	Teachers in charge of application	S.L.Dr.Ing. Gherman Marius-Calin	

Date of approval in the department	Head of department conf.dr.ing. Attila Puskas
18/06/2025	
Date of approval in the faculty	Dean prof.dr.ing Daniela MANEA
25/06/2025
