

SYLLABUS

1. Data about the program of study

1.1	Institution	The Technical University of Cluj-Napoca
1.2	Faculty	Faculty of Civil Engineering
1.3	Department	Structures
1.4	Field of study	Civil Engineering
1.5	Cycle of study	Bachelor of Science
1.6	Program of study/Qualification	CCIA English/Engineer
1.7	Form of education	Full time
1.8	Subject code	9.00

2. Data about the subject

2.1	Subject name	History of Technic in Constructions									
2.2	Subject area	Civil Engineering									
2.3	Course responsible/lecturer	Lecturer phd.eng. Olar Radu – radu.olar@dst.utcluj.ro									
2.4	Teachers in charge of seminars										
2.5	Year of study	1	2.6	Semester	1	2.7	Assessment	C	2.8	Subject category	DC DI

3. Estimated total time

3.1	Number of hours per week	2	3.2	of which, course:	2	3.3	applications:	-
3.4	Total hours in the curriculum	28	3.5	of which, course:	28	3.6	applications:	-
Individual study								14
Manual, lecture material and notes, bibliography								6
Supplementary study in the library, online and in the field								-
Preparation for seminars/laboratory works, homework, reports, portfolios, essays								-
Tutoring								-
Exams and tests								2
Other activities								-
3.7	Total hours of individual study			22				
3.8	Total hours per semester			50				
3.9	Number of credit points			2				

4. Pre-requisites (where appropriate)

4.1	Curriculum	
4.2	Competence	-

5. Requirements (where appropriate)

5.1	For the course	
5.2	For the applications	

6. Specific competences

Professional competences	<p>Basic terms and principles in the construction domain.</p> <p>Basic of the buildings structural behaviour.</p> <p>Structural conformation of historical buildings.</p> <p>Architectural elements.</p> <p>The evolution of construction techniques.</p> <p>Structural mechanisms and relation between the function and the shape of a structure.</p>
Cross competences	<p>To identify buildings of different time periods.</p> <p>To understand the behavior of structures, their design principles and how they are realised.</p> <p>To distinguish between structural and non-structural elements of a building.</p> <p>To know the modern techniques of design and execution in the construction field.</p> <p>To know the properties of modern construction materials.</p> <p>To know the issues and challenges facing a civil engineer in his work.</p>

7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	The proper knowledge of specific terms in civil engineering domain
7.2	Specific objectives	<p>To understand the importance of the following disciplines in order to become specialists in this domain</p> <p>To have a proper view on the structural behaviour and relation between the function and the shape of a structure.</p>

8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1.	Introduction. Definitions, concepts regarding the buildings and the build patrimony.	The course are presented in a multimedia way, the students can interfere with questions and discussions are possible	
2.	Historical evolution of the constructions related to mankind development.		
3.	Function – structure – architecture.		
4.	Constructions of the ancient world		
5.	Medieval constructions		
6.	Renaissance constructions. Buildings of the industrial revolution period.		
7.	The evolution of shapes, technical and structural evolution in the last 100 years		
8.	Appearance and development of new materials and technologies for buildings		
9.	The evolution of modern construction industry and technology -I-		
10.	The evolution of modern construction industry and technology -II-		
11.	New construction technologies -I-		
12.	New construction technologies -II-		
13.	Modern buildings: shapes, trends, areas of development -I-		
14.	Modern buildings: shapes, trends, areas of development -II-

Virtual didactic materials

1. *Movies and images of buildings systems, technologies and construction materials.*

8.2. Applications/Seminars		Teaching methods	Notes
1.			
2.			
3.			
4.			
5.			
6.			
7.			
8.			
9.			
10.			
11.			
12.			
13.			
14.			

Bibliography

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

During the semester period, visits on the construction sites are organised in order to be presented to students practical aspects related with the execution and structural design. Direct contact with the representatives of the companies are possible.

10. Evaluation

Activity type	10.1 Assessment criteria	10.2 Assessment methods	10.3 Weight in the final grade
Course	Quality evaluations performed by analysis, synthesis, generalization of data obtained through its own investigation and acuirements	The evaluation consists in an individual presentation of a building structure and a multichoice questions test related to the construction techniques and materials.	P – presentation, A – answers to questions N=0,6P+0,4A only if P>4, A>4.
Applications			
10.4 Minimum standard of performance			
N≥5.00
